# Where are we from?

Wintecare is a company established and managed by a team of professionals with more than ten year of experience in the medical and sport fields. Having its main office in Switzerland, Wintecare and its team combine the values coming from the medical, scientific and empiric research fields with a new way to communicate them, to make them easily and widely accessible.

# Where are we located?

Our team is in Switzerland, however our products are certified in Europe (Medical CE), in the United States of America (FDA) and in South-Korea (KFDA). We are, at the moment, present in 14 European Countries, in Asia and the USA, our products are mentioned in scientific researches published on impact factor magazines. With more than 1 million visualisations every two-months, Wintecare's contents are among the most followed on social medias in the rehabilitation and sport performance fields.

# What is our mission?

Our mission is to provide a consistent answer to patients who strive to reduce their therapeutical times and accelerate recovering processes. To do so, we provide the most performing tools to the therapists who want to make the difference in their areas of application. Furthermore, we help them to communicate their services to their public in the most effective way possible and we support our commercial partners to orientate them to the market, towards the improvement of their results through live and streaming training courses.

# Application Areas

W I N T E C A R E®

# Rehabilitation

Where the key word is inflammation. Accidents, musculoskeletal disorders and surgical operations are traumas that our body faces periodically. In response to these events it reacts through inflammation, representing on one hand the origin of the problem at symptomatic level and on the other the beginning of the healing process. Many of the effects of inflammation are strongly related to the circulatory system; quick action on this system is thus essential to restore full well-being. In the field of rehabilitation WINTECARE develops and combines technologies through work programs where the practitioner relies on the most effective tools to stimulate the necessary reactions to achieve lasting therapeutic results in the shortest possible time.

W I N T E C A R E®

# Performance

You don't need to be a professional athlete to be a sports lover. Many people love it because it brings us closer to our instincts while elevating us to better people. Unlike other disciplines, training techniques are becoming increasingly sophisticated and scientific with thousands of new technologies on the horizon and many already on the market. We are all looking for a better solution, but choosing the right one is becoming increasingly difficult. In the world of professional sports, the answer doesn't lie in a particular technology but rather in the ability of health professionals to combine the correct tools to achieve the goals set in their athletes' training programs. Improving times for a marathon, increasing strength or explosiveness, improving coordination ... These are objectives that can be reached in a reasonable time if you know the human body and the biomechanics that underlie its functioning. In the field of performance WINTECARE develops and combines technologies through work programs where the practitioner holds the most effective tools for a sportsman – whether professional or amateur – to give his best, with proven results for muscle recovery, flexibility, tissue oxygenation and optimization of muscle fibres recruitment.

# Body Conditioning

The world of aesthetics and anti-aging is as big as that of medicine. The search for the elixir of eternal beauty has inspired many stories and initiatives and still arouses interest even in those who belong to the scientific world. Looking in the mirror and feeling good about yourself doesn't just depend on weight, muscle tone or skin hydration. Feeling good includes the perception of your body as a whole. In its work in Body Conditioning and for anti-aging, WINTECARE has adopted an integrated vision not far from the medical world, helping patients to improve the way they perceive themselves, examining and acting simultaneously on different systems of the body.

Considering the patient's starting point and helping him/her to design how he would like to appear, the professional plans strategic programs focused on circulatory and neuro-muscular actions, such as to help the person to perceive himself in the way he wishes, in the shortest possible time.

W I N T E C A R E®

T~PLUS is a tecar technology that allows to transfer large amounts of energy enjoying the maximum levels of comfort and safety both for the patient and the therapist.

### **UNIQUE in the world**

In Capacitive Mode T-Plus is the only tecar technology that doesn't need the application of conductive cream. This feature allows an easy combination of manual techniques with the energy transfer, for example in case of a miofascial application. Furthermore, the patented signal generation and energy control system guarantees the measurement of the actual energy transferred to the tissues. The extreme sensibility of the device makes it perfect for treatments that requires the highest precision, like for example for treatment pre and post surgical intervention.

### MAIN CHARACTERITICS

Medical Device Class IIB - CE, FDA, KFDA Approved

Frequency ~ 0,5 MHz

Power – Tension CAP 450 VA – 600 V

Power – Tension RES 300 W – 150 V

Weight 6,8 kgs

Dimensions 50cm x 27cm x 19cm

# Special Accessories

## Cream-free electrodes

The new cream-free resistive electrodes complete the range associated with the T-Plus device for those who do not want to give up manual sensitivity during the application of energy transfer to the body. They are able to transfer large amounts of energy in all conditions. Ideal for applications that need to combine temperature increases with the mobilization of the joint districts.

Energy transfer is a powerful tool capable of generating useful reactions (blood perfusion, vasodilation, temperature increase, cell proliferation) for therapeutic purposes. This reactions are even more effective when combined with a manual action. Over the years we have become accustomed to the idea that it was always necessary to apply a conductive cream before applying any type of energy transfer.

WINTECARE's recent innovations have shown that some instruments are able to guarantee excellent performance even without the use of conductive cream. The coating of the T-Plus capacitive electrodes and the new metal processes used for the cream-free resistive electrodes belong to this line of innovations. From today it is possible to apply the energy transfer also in all clinical conditions in which the manual maneuvers necessary for therapy imply a sensitivity and friction on the skin that would make the use of a cream inconvenient. Think, for example, of all the traction and detachment maneuvers that the therapist is often called upon to perform on patient suffering from painful myofascial syndrome or in any other case in which the grip on the body becomes fundamental to conduct therapy.

## Special Accessories

### Cables for Fixed Plates

The special WINTECARE cables compatible with the T-Plus device are developed to allow the use of “fixed” plates guaranteeing firm positioning throughout the treatment and thus preventing the energy transfer to be influenced by position variations of the electrodes.

The special cables check that the current flow does not exceed the safety threshold for fixed applications ensuring a safe and pleasant treatment.

In the same way, this mode can be used to combine energy transfer with an active movement of the patient controlled by the therapist, for example when simulating a gesture that replicates the biomechanical conditions typical of an amateur athlete or worker with specific environmental conditions.

## Special Accessories

### Diathermic Fibrolyzers

Available in both capacitive and resistive modes, diathermic fibrolyzers have the shape and materials suitable for exploiting the potential of energy transfer while maintaining safety for the patient.

The ergonomic handles guarantee an optimal grip both for precision applications and for applications where more pressure is required. Diathermic fibrolyzers are therefore an essential tool for therapists who wish to include fibrolysis in their baggage of application skills.

WINTECARE®

T-PLUS

W I N T E C A R E ®

W I N T E C A R E®

V-PLUS is a technology that converts electromagnetic energy into high efficiency focal vibrations. It's a "must have" tool for whoever looks forward to quick results on pain and motor control. The fields of application vary from geriatrics, rehabilitation, neurology, pain, sports medicine, sports performance.

### **UNIQUE IN THE WORLD**

With a patented mechanic vibration generation and control system, the device combine an extremely light generator with a versatile and high force vibrating signal. Its 6 independent channels and 24 Newton of force guaranteed on the whole range of modulable frequency make it a unique tool in its field.

### **GENERAL CHARACTERISTICS**

Power supply and Frequency: 110 - 240 V 50 - 60 Hz

Vibrating frequency on transducer: 30-300Hz

Pressure on transducer: 200-1500gr/cm

Stand by consumption: 4 Watt

Dimensions/Weight: L 30 x P 30 x H 16 cm / kgs 1,8

# Functional Products

W I N T E C A R E®

# Conductive Cream

It improves skin conductivity and accelerates deep electrolytic mobilisation for a more efficient tecar treatment.

The new Wintecare formula optimises the concentration of sodium compared to other ingredients so to guarantee a very low impedance associated to comfortable feeling and neutral smell.

Particularly indicated for professional treatments, even if repeated several times in the day. It can be used on any tecar device.

Contents: 1000 ml

W I N T E C A R E®

# Dermoclean Solution

Dermoclean Solution removes resistive substances deposited on the skin to facilitate better skin conductivity. For an optimal tecar treatment.

In absence of a medical device, it can be used to remove toxins on patient's skin so make prepare him/her to the massage.

Contents 500 ml

W I N T E C A R E®

# Drainage A+ Solution

Drainage A+ Solution supports the lymphatic system in order to quickly drain lactic acid, catabolites, water retention and swelling.

Indicated to whoever is aiming to immediate relieving effect after training or in presence of excess liquids on arms and legs.

Its use is in combination with bandages.

Contents 500 ml

W I N T E C A R E®

# Energy A+ Cream

Get a feeling of muscle readiness and lightness. Ideal both before and after exercise. Focused and designed to complete professional treatments.

Its active principles stimulate micro-circulation that shall help eliminating catabolytes and all waste substances generating post training pains.

Contents 200 ml

W I N T E C A R E<sup>®</sup>

# Energy A+ Spray

Get a feeling of muscle readiness and lightness. Ideal both before and after exercise. Light and easy to apply even at home.

Due to its immediate positive effects, Energy A+ Spray is used by élite athletes in international sports.

Contents 150 ml

W I N T E C A R E<sup>®</sup>

# MyoDrain Oil

MyoDrain Oil is suitable for reducing the accumulation of tension and stress.

The draining effect of its functional principles is assisted by aromas that contribute to relax the treated person and improve the his/her skin appearance.

A few drops are applied on the area to be treated and it is applied massage until the product is distributed and absorbed homogeneously on the skin.

Contents 50 ml

W I N T E C A R E<sup>®</sup>

# Energy Oil

It guarantees a feeling of energy after rest or following a specific treatment in order to help the subject return to his motor activities more easily.

A few drops of Energy Oil are put on the body part that is then energetically massaged until the complete and homogeneous absorption is reached.

Contents 50 ml

W I N T E C A R E<sup>®</sup>

# Warmup Oil

It brings the temperature of the extremities of the body back to a condition of normalcy and homogeneity favouring a regular microcirculatory activity in the affected area..

A few drops of Oil are put on the desired body part that is then energetically massaged until the complete and homogeneous absorption is reached.

Contents 50 ml

W I N T E C A R E<sup>®</sup>

## Tecar Electrode Cleaner

Tecar Cleaners are cleaning wipes for capacitive and resistive tecar electrodes, tested by Wintecare. The sanitizing formula leaves surfaces clean and scented.

Tecar Electrode Cleaners are a safe and effective way to sanitize electrodes and device plates safely without damaging the equipment.

24 packages of 30 wipes each (tot. 720 cleaner)

W I N T E C A R E<sup>®</sup>

# Elastic Cotton Bandages

Elastic cotton bandages used with Drainage Solution to drain legs and / or arms in depth, fight fatigue, restore a feeling of lightness and recover your energy.

The bandages are washable and therefore reusable.

W I N T E C A R E<sup>®</sup>

# Wintecare Trolley Bag

Trolley Bag to carry the tecar technology also in travel!

Designed to be used as hand luggage, the Trolley Bag consists of 2 sections: a base that contains the technology and protects it from possible impacts and an upper part dedicated to electrodes, cables and cream.

The two sections of the trolley consist of one hinge technology that allows you to divide the 2 components.

W I N T E C A R E<sup>®</sup>

## Wintecare Sports Bag

A practical, comfortable and resistant sports bag, a companion in sport or professional activity.

## Wintecare Bedsread

To combine practicality and elegance, the bedsread Wintecare is ideal. 100% cotton, washable and reusable, fits any physiotherapist bed, portable or fixed.

Dimensions: 100 x 220 cm

## Wintecare Towel

100% cotton, useful to put the patient at ease during the treatment but also to accompany sports activity.  
Standard Size: 50 x 70 cm  
Large Size: 100 x 200cm

## Wintecare Gloves

Pair of 100% cotton gloves useful for cleaning the patient's skin and prepare it for treatment.

## Wintecare Plate Heater

The heating pouch for the neutral plate is the essential accessory to ensure maximum comfort for the patient, eliminating the discomfort contact with the cold plate.

W I N T E C A R E®

## Basic Treatments Kit

Do you want to get the most out of your tecar treatments?  
We have thought of a basic kit to be at the top of efficiency  
since first steps.

What is it made of?

n ° 4 Conductive A + Cream 1000 ml

n ° 2 Dermoclean Solution

n ° 2 Gloves

How to use?

Dilute 3 caps of Dermoclean solution in 500ml of water lukewarm and mix. Dip the gloves, and after having them well squeezed, pass them over the patient's skin to remove the impurities that create resistance. Once dried, the patient is ready to be treated. Apply a small amount of Conductive A + cream on the neutral plate and on the skin of the patient, and now ... good job.

W I N T E C A R E<sup>®</sup>

## Oils Kit

The perfect kit to combine the different properties and benefits of oils studied and approved by Wintecare specialists.

What is it made of?

n ° 1 Energy Oil 50ml

n ° 1 MyoDrain Oil 50ml

n ° 1 Warmup Oil 50ml

How to use?

Wintecare oils can be used both in preparation for a treatment, both in the final phase. Apply few drops on the affected area of the body and massage it vigorously distributing the product homogeneously.
